Please help me to import and install this software. My english is not so good. A: Install Wine Download and run the installation CD and follow the instructions 1. Technical Field The present invention relates to a liquid crystal display device. 2. Related Art In recent years, liquid crystal display devices have come to be in widespread use as display devices for personal computers and the like. In these liquid crystal display devices, liquid crystal is sandwiched between a pair of substrates, and an electric field is applied to the liquid crystal in a direction perpendicular to the substrates so that the optical rotatory power of the liquid crystal is controlled. When the twisted nematic (TN) mode and the super twisted nematic (STN) mode are used for liquid crystal display devices, substrates are fabricated by forming a non-patterned transparent conductive film over a glass plate or by forming a TFT on a glass plate. When an active matrix liquid crystal display device is fabricated on these substrates, a light source device such as a backlight is disposed under the liquid crystal display device, and a display image is obtained by controlling the transmittance of a transmitted light emitted from the light source device. In the TN mode, for example, if an electric field is applied to the liquid crystal by driving the TFT, and if the voltage of a voltage applied to the liquid crystal is not applied to an electrode part of the TFT when the TFT is in the off state, then a so-called naturally white display can be obtained. Thus, in the related art, when the TFT is in the off state, the applied voltage is held for about one frame period or more before the applied voltage is applied to the liquid crystal to hold the display state. When a liquid crystal display device is used for a portable television receiver, a flat display device is required to reduce power consumption. In order to realize a flat display device, a thin display device is required to be used for a liquid crystal display device. However, a liquid crystal display device has a problem in that the required contrast ratio may not be achieved because of the so-called disclination of light in a liquid crystal display device. The disclination is caused by the liquid crystal molecules being in contact with a liquid crystal cell and the liquid crystal molecules being arranged in a direction perpendicular to the substrate in the liquid crystal cell. In a TN liquid crystal display device, if the liquid crystal molecules are arranged in parallel to the substrate in
